

## Marvel of Nature and Technology

We are pleased to introduce a culinary wonder: Hawaiian Deep Sea Salt. This remarkable salt is naturally derived from pristine seawater using a sustainable, proprietary method.

## Unrivalled Mineral-Rich Seawater

- Scientists have found that deep sea currents are the coldest and saltiest waters, and they do not readily mix with other ocean water.
- Mineral-rich seawater is harvested 2,000 feet below the surface.
- Meticulous processes are followed to preserve the delicate balance of vital ocean minerals.

## Alkalizing Treasure from the Deep

- Only 76.9% sodium chloride.
- An alkalizing pH of 10.22.
- Pharmaceutical grade.
- Appreciated by gourmets around the world for its natural taste and assertive flavor.
- Great in a grinder, but when used as a whole crystal it dissolves on the taste buds with a sublime flavor.
